

JenarkRemote

Description

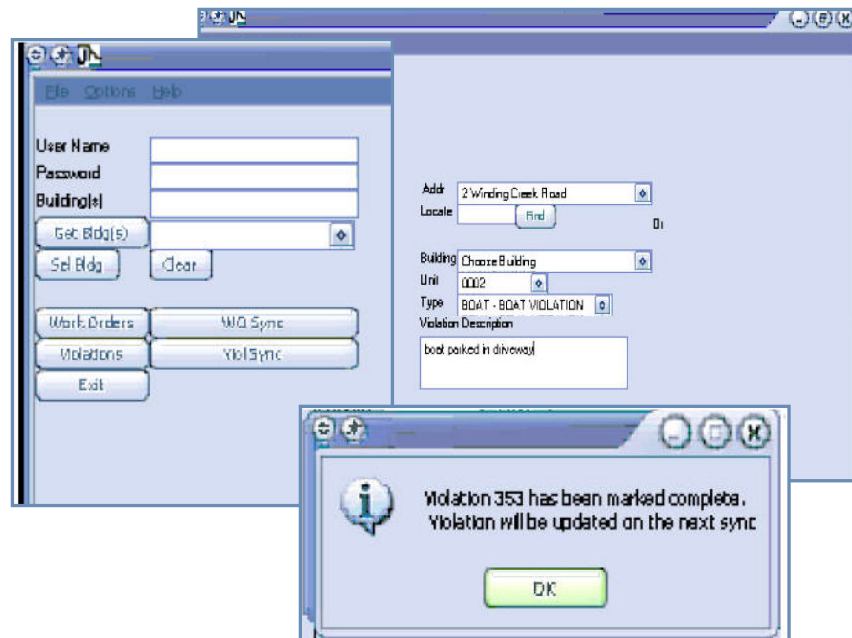

JenarkRemote is a wireless solution for community association property management companies that replaces the paper-based method of creating and updating violations or work orders in the field – now field personnel and inspectors can work remotely in a more efficient manner. CC&R violations, work order creation, data capture, and updates can be completed in the field. After entering the necessary data, this easy-to-use application allows you to synchronize captured data to your Jenark software. JenarkRemote ensures consistent data entry from the field, improves productivity, and saves time.

Benefits

- Eliminates paperwork by replacing it with electronic documents
- Provides an efficient way to create, update, and retrieve violations and work orders
- Delivers real-time data for optimal efficiency

Features

- **Flexible** – JenarkRemote is customizable with technical support available
- **Easy-To-Use** – data is entered into a laptop, notebook or PDA and syncs with just a click of a button
- **Adaptable** – JenarkRemote can be used on any electronic device that runs the Microsoft Pocket PC Operating System

How It Works

When in the field, use JenarkRemote to search for, update, and create a violation or work order. You enter applicable information into the violation and work order and click complete to save the information. Then you simply click a button to sync the field entered data with your Jenark database. It's that easy!

JenarkRemote works in conjunction with our community association property management system. Whether for a management company or a self-managed community, this is a time-saving approach for violations and work orders.
